

Performance Fabric Definitions

Crypton® Super Fabrics

Resist spills, stains, odor and microbial growth keeping your furniture cleaner and looking better longer. All Crypton styles have an integrated, breathable moisture barrier that protects the furniture's under padding.

Crypton® Green

A third party certified performance upholstery fabric which combines a reduced environmental impact benefit with the performance attributes of Crypton® Super Fabric. All Crypton® Green fabrics are produced using environmentally preferable fibers and yarns. These fabrics resist spills, stains, odor and microbial growth while protecting the furniture's under padding with an integrated moisture barrier.

Crypton® InCase Fabric Protection

An advanced soil, stain, and microbial-resistant finish which utilizes next generation chemistry and application processes to reduce its environmental impact. InCase gives fabrics superior cleanability and is perfect for when you need to resist spills, stains, odors, and microbes, but do not require a moisture barrier backcoating.

Woven Agion®

Safe, effective and durable, Agion® patented antimicrobial is "built in" to the upholstery, becoming an integral part of the material, unlike topically applied treatments.

GreenShield®

A patented, nano-particle based, reduced environmental impact soil and stain protective finish. GreenShield's unique chemical architecture is comprised of spherical particles that deliver water and stain repellency more efficiently than other performance finishes available in the marketplace. Simply put, GreenShield® delivers soil and stain protection using less chemistry. GreenShield® is SCS Indoor Advantage Gold certified.

Solution Dyed Nylon

Ideal for high traffic environments, solution dyed nylon fabrics are extremely durable, bleach solution cleanable and offer extended colorfastness to light (fade resistance). Color is "locked in" to the fibers by coloring the polymer solution prior to it being extruded.

PVC Free with Agion®

Safe, effective and durable, PVC Free with Agion's patented antimicrobial is "built in" to the upholstery, becoming an integral part of the material, unlike topically applied treatments.

Agion® Antimicrobial

Activated by moisture which releases silver ions to the surface of the upholstery at a steady rate. These silver ions offer continuous protection against bacteria and odor-causing mold on the Agion® protected upholstery.

Sta-kleen™

A long lasting "shield" that protects the surface of the upholstery from ink graffiti and other damaging stains. Stains such as ball point ink, yellow mustard and other traditionally difficult stains are easily removed and virtually "erased" by cleaning with a dry cloth or mild soap and water.
